Dear AJCE Community,

STEM (science, technology, engineering, and mathematics) has been promoted by many researchers and organizations as one way to offer meaningful and relevant learning opportunities. Chemistry is part of the Science domain in the STEM agenda. But it is not clear to what extent Chemistry contributes to overall STEM learning and what are the best ways to introduce/integrate Chemistry in STEM. Recent attempts have also been made to extend STEM to STEAM (science, technology, engineering, art/design, and mathematics). STEAM = STEM + Art/Design.

AJCE would like to publish an issue on this topic and kindly invites the community to submit research papers, reviews, policy briefs, etc.

Enjoy reading the July 2024 issue of our Journal!
