

Retraction

The Editor-in-Chief was notified that Section 2 of the paper: Alveera Mehdi, Ayazul Hasan and Fahad Sikander, On submodules of QTAG-modules, International Journal of Engineering, Science and Technology, Vol. 6, No. 2 (2014), pp. 20-30. was copied from the paper “Peter V. Danchev, Generalized Dieudonné and Honda Criteria for Primary Abelian Groups, Acta Math. Univ. Comenianae LXXVII, no. 1 (2008), 85-91.”. As the reporter puts it:

“It was a very clever kind of plagiarism”... “It is similar with other terminology, which helps them [the authors] cover up the plagiarism and protects them from detection by Google search.”

Subsequent to examination of these articles and the supporting evidence, and after discussion with the corresponding author of the article and the Editorial Board member in that field, the claim is correct and the Editor-in-Chief of the International Journal of Engineering, Science and Technology has decided to retract the paper immediately.”
