Abstract: A checklist of the butterflies (Lepidoptera: Papilionoidea) of the north-eastern Democratic Republic of Congo is provided. The list was compiled from records made by the author as well as from historical records and the records of a number of field workers. The presence records are separated into five fairly distinct regions, namely the Ituri Forest, Semuliki Valley in the Albertine Rift, Central Forest Block, Mount Mitumba and Mount Blue.

Key words: Lepidoptera, Papilionoidea, butterflies, Democratic Republic of Congo, Kivu, Ituri, Semuliki Valley, Albertine Rift, Mount Mitumba, Mount Blue.

Citation: Ducarme, R. (2018). The butterflies (Lepidoptera: Papilionoidea) of the north-eastern Democratic Republic of Congo. *Metamorphosis* 29: 23–37.

INTRODUCTION

The author has spent more than forty years in Beni, North Kivu Province, in the north-eastern Democratic Republic of Congo (DRC) (Fig. 1). He and local people (for the last 15 years) have collected butterflies in a 200 km radius around Beni. The locals are in the insect trade but have also provided many specimens for the African Butterfly Research Institute (ABRI), in Nairobi, Kenya. Many descriptions of species new to science have been made from this material. Collecting in the area is easy if you have permission. However, at present the area is not safe as a result of local human conflicts. The inventory has been compiled over the last forty years. The author has collaborated with many people who are specialists with regard to particular taxa.

MATERIALS AND METHODS

Specimens were collected over a period of forty years from five localities in north-eastern Zaire. Identifications were made using standard texts and by the specialist collaborators listed in the Introduction.

Coordinates for each of these five localities were:

- 1) Ituri Forest – evergreen forest near Epulu, 01° 23'N, 29° 36'E, 850 m;
- 2) Semuliki Valley– sclerophyllous forest near Lume 00°15'N, 29° 34'E, 1 200 m;
- 3) Central forest block – evergreen forest near Kisangani (127 km from Bunia), 00° 15'N, 29° 15'E, 600 m;
- 4) & 5) Mounts Mitumba and Blue – montane forest near Djugu, 02° 10'N, 30° 40'E.

Afrotropical butterfly taxonomy to generic level, follows Williams (2015), Dhungel & Wahlberg (2018) and Espeland *et al.* (2018).

Figure 1 – North-eastern provinces of the DRC (green). Adjoining provinces in red and adjoining countries in yellow.

RESULTS

The number of taxa recorded for each locality in the north-eastern Democratic Republic of Congo, to subfamily level, is given in Table 1. The complete list of taxa for each locality is given in Table 2.

DISCUSSION

The provinces of north-eastern DRC (Kivu, Ituri, Uele, Tshopo and Maniema) (Fig. 1) are exceptionally rich in butterfly species (Continued on page 37).

Table 1 – Number of taxa recorded for each locality in n-e DRC, to subfamily level (I F = Ituri Forest; S V = Semuliki Valley, Albertine rift; CFB = Central Forest Belt; M M = Mount Mitumba; M B = Mount Blue)

Totals for the subfamily Theclinae	77	40	27	66	16		
Totals for the family Lycaenidae	406	169	114	306	76		
Taxon totals for each locality	1094	591	393	865	340		

X¹ – *Papilio nireus nireus* occurs throughout the region. *Papilio nireus lyaeus* is only found at Kasenye (01°24'N, 30°26'E), in savanna, on the shores of Lake Albert.

X² – *Papilio echerioides nioka* has been collected in the region by Hecq and Desloges but no specific localities were noted.

X³ – *Papilio lormieri semlikana* was collected at Ishara (00°27'S, 29°39'E) in Rutshuru Territory on Mount Mitumba.

X⁴ – *Euphaedra medon neustetteri* occurs in the extreme north-east of the region at Afarama (01°33'N, 28°30'E), Parc d'Epulu.

X⁵ – *Tetrarhanis ilma daltoni* is found at Matwa near Lubéro on Mount Mitumba at 2 000 m.

X⁶ – *Pilodeudorix mera mera* occurs in the central basin (e.g. Mambasa, 900 m, 00°21'N, 29°03'E). X⁷ – *Pilodeudorix mera kinumbensis* occurs further east than the nominate subspecies, at higher altitudes.

X⁷ – *Pilodeudorix mera kinumbensis* occurs further east than the nominate subspecies, at higher altitudes.

X⁸ – *Deudorix lorisona lorisona* occurs in the north-east of the region while *Deudorix lorisona baronica* is found in the east, e.g. Lume (00°15'N, 29°34'E). The two subspecies intergrade.

X⁹ – *Iolaus menas menas* occurs in forest but *Iolaus menas tatiana* is found only in savanna at Kasenye (01°24'N, 30°26'E).

DISCUSSION (contd.)

The lists presented in this paper include 1 331 taxa, representing nearly one third of all the taxa currently known from the whole Afrotropical Region. Many of the records given in the list constitute considerable range extensions for specific taxa, some for example, previously known only from Cameroon, about 1 600 km to the west.

One hundred and twelve taxa are endemic to north-eastern DRC (Table 3, below). Genera with disproportionate numbers of endemic taxa include *Apallaga* (Hesperiidae: Pryginae); *Bicyclus* (Nymphalidae: Satyrinae); *Cymothoe*, *Euriphene*, *Bebearia*, *Euptera* (Nymphalidae: Limenitidinae); *Telipna* (Lycaenidae: Poritiinae); *Aslauga* (Lycaenidae: Miletinae); *Pseudaletis* (Lycaenidae: Aphnaeinae) and *Neurellipes* (Lycaenidae: Polyommatainae).

ACKNOWLEDGEMENTS

The author has collaborated with many people who are specialists with regard to particular taxa. These people include Lucien Berger, Jacques Hecq, Jacques Plantrou, Torben Larsen, Michel Libert, Thierry Bouyer, Eric Vingerhoedt, Jean-Pierre Lequeux, Bernard Turlin, Jacques Pierre, Dominique Bernard, Michael Beaurain and, especially, Steve Collins of ABRI.
